recipe

shoppin

Users' needs of smart freezers and daily cooking

● in demand  
● no demand

## Background

What should I cook for dinner?

We can hear mums asking their family or friends this question a lot. And they usually open the freezer and stare for a while.

## Opportunity

Finding a way to make cooking become easier for families. People can get ideas and manage their freezer anywhere.

## Market Research

	✓	✗
 	Foods management Freezer temperature control	Manual input Simple function modules Low practicability
 	Recipe recommendation Food Store	Users needs to buy the foods shown on the recipe

## Design Map

## Tendency

Smart Freezer will become the center of the family in the future

## Conclusion

Make the family cooking become more smart

Users' need are gradually increasing as the intelligent requirements of refrigerators are increasing. As the future center of the family, users hope it can offer more pragmatic functions, such as detailed and suitable recipe, paying by one click and communication.

S

Each person who takes charge in the family meals have been beset by the question what should they cook.

W

Most of app has separated the freezer and recipe functions while freezer is the most important one that stores food in a family.

O

According to the foods in the freezer to create a recipe, people don't need to buy other food for the meals.

T

Many companies have realized that freezer is playing an important role in a family. Not only it related to the family food, but also it is the only one which opened for 24hours a day

## SWOT analysis

## INSIGHT

When it comes to food, freezer may be easily ignored before. My product will be aimed to connect not only the freezer and recipe, but also the kitchen and the outdoor scenes. What's more, there should be a function that can record the member's likes and dislikes.

# Scenario

With kids

'What do you want to eat?'

Dinner at home

Not sure about everyone's eating choice

Clean up

Lost of food is out of time / Some important foods is out of use

## Problem

The one who takes responsibility for the meals is annoyed by these questions.

## Opportunity

Finding some ways to make daily cook become easier.

# Interview

When mentioned to prepare dinner for family, they showed their views.

Lena 30

"I have to figure out what I can cook for each meal, and most of time I totally have no idea after thinking so many times."

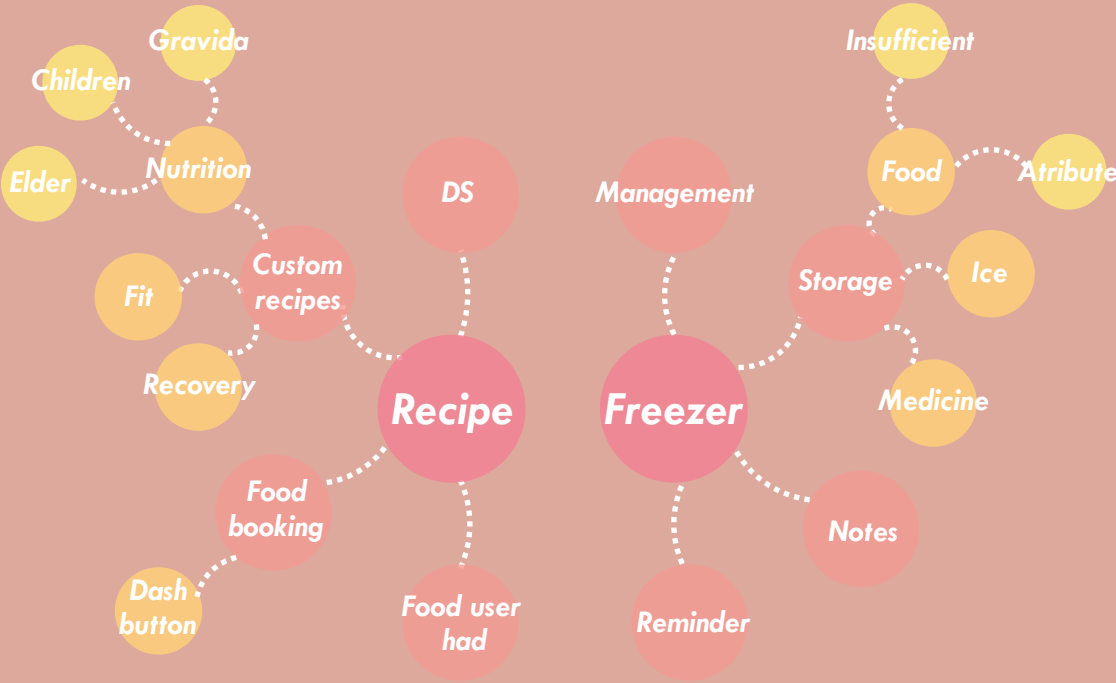

Tony 34

"Sometimes I can hear my family complain about the food I make, because they have changed their favorites or found some food cause allergy to them."

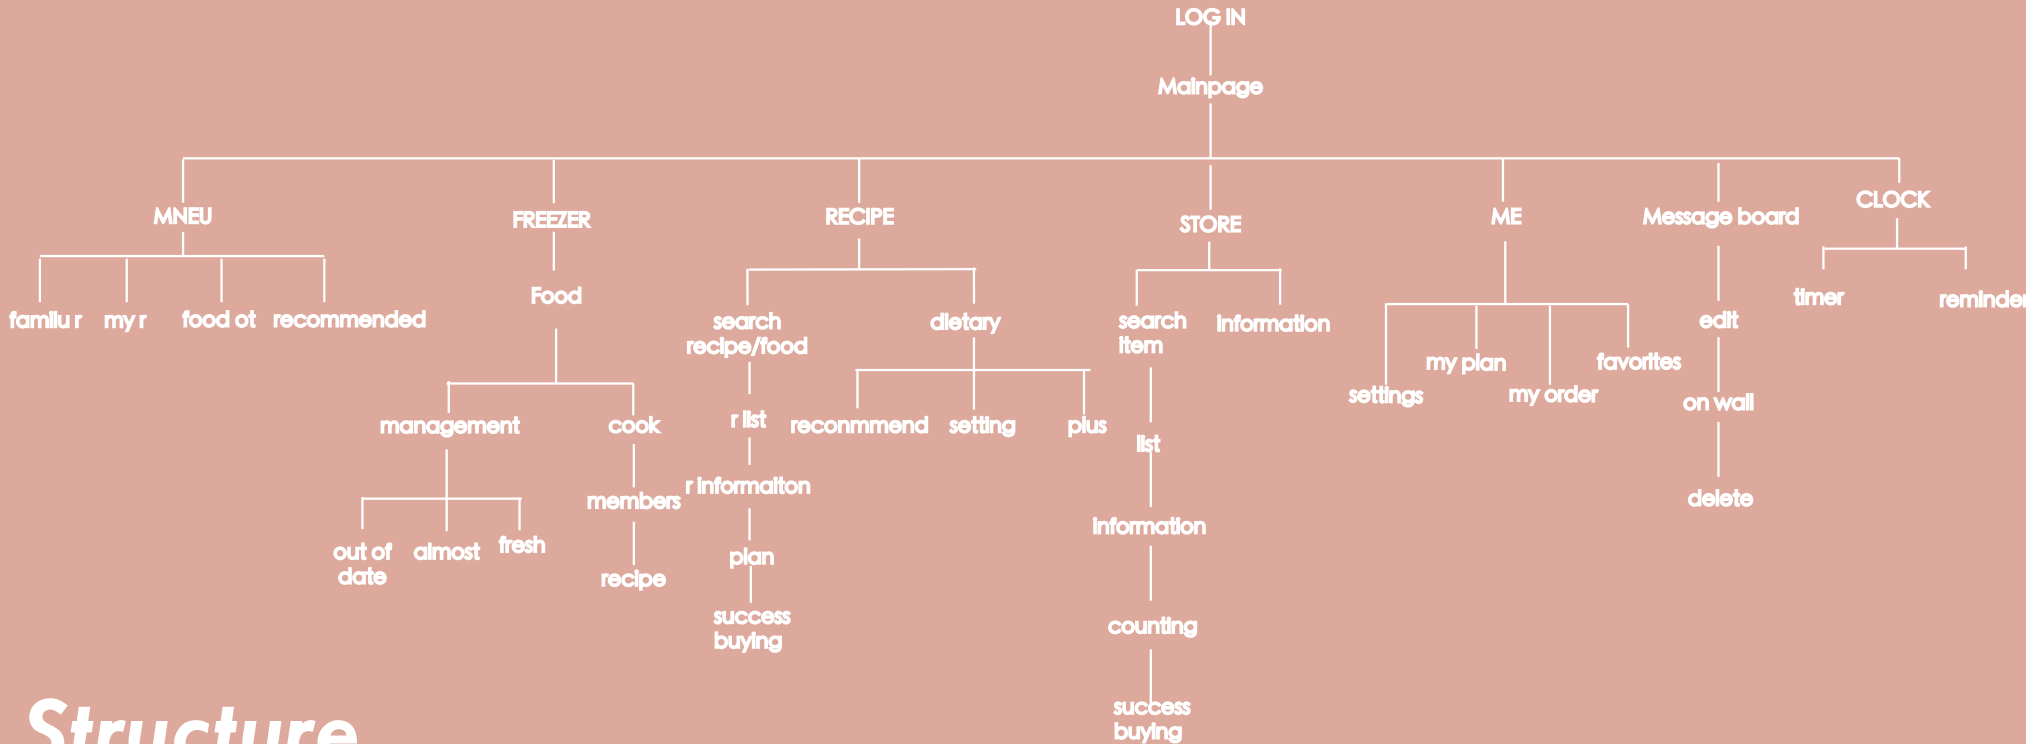

Maggie 39

"I am kind of busy in my work, so I usually can't remember what food I have sent into the freezer. And when I have to cook, the food I need have already expired"

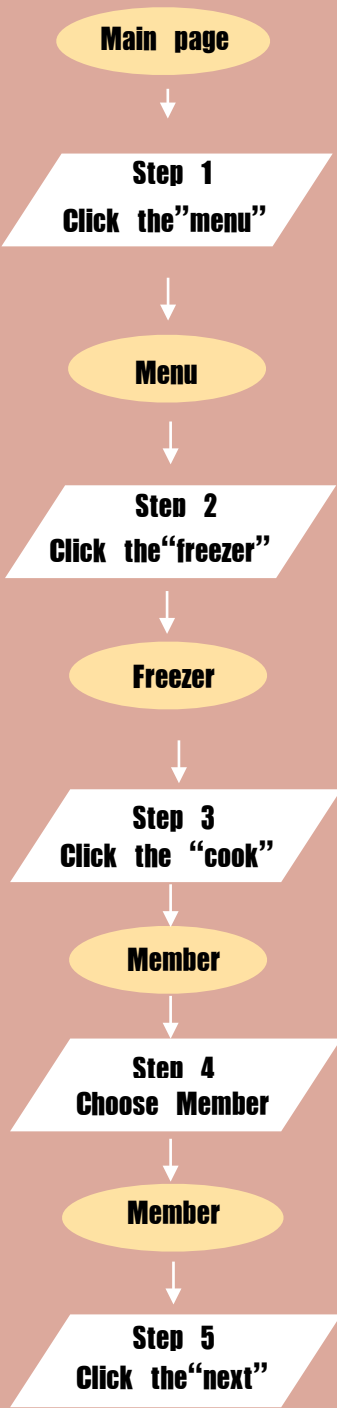

# Mind Map

Daily food recommend, one key order, make kitchen become more convenient

04

07

06

05

- When making a choice about the family meals, there should be an effective way to ask other members' **opinions**.
- When picking food to cook, it should have a more **distinct** classification for users to find food.
- A function for members to type in what they want to eat that day should be present in the app.

## Background research

During a project research, a group of elderly people were often found walking **birds** in the vicinity of the museum, and I have some interviews with them.

### 3 reasons

#### interviews

people choose birds to walk with

- 1 making friends & relaxing
- 2 birds in cage are easier to control
- 3 keeping birds can be one of their topics

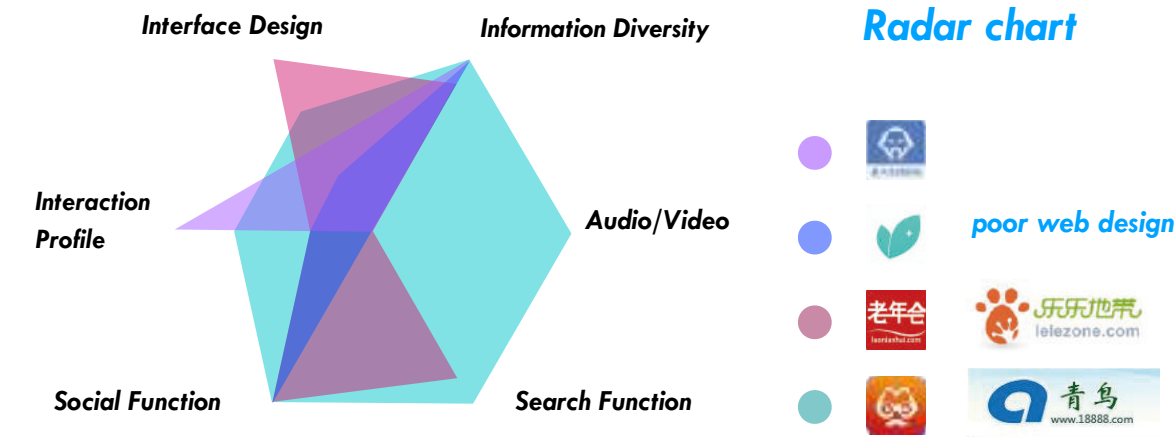

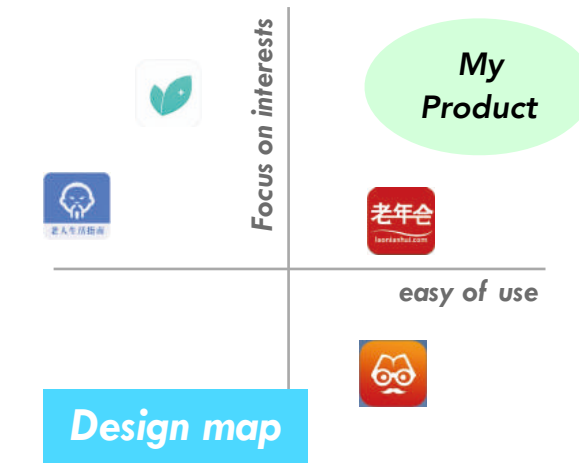

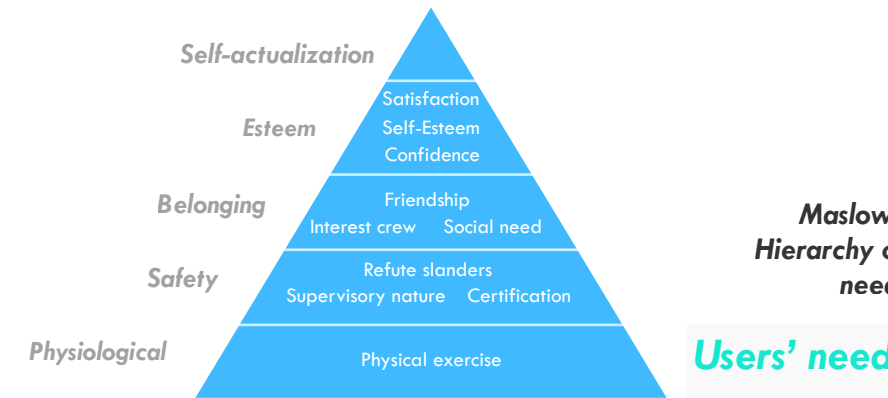

## Opportunity

Through interactive design, creating a platform for older people finding partners based on interest to **increase** their happiness.

## Conclusion

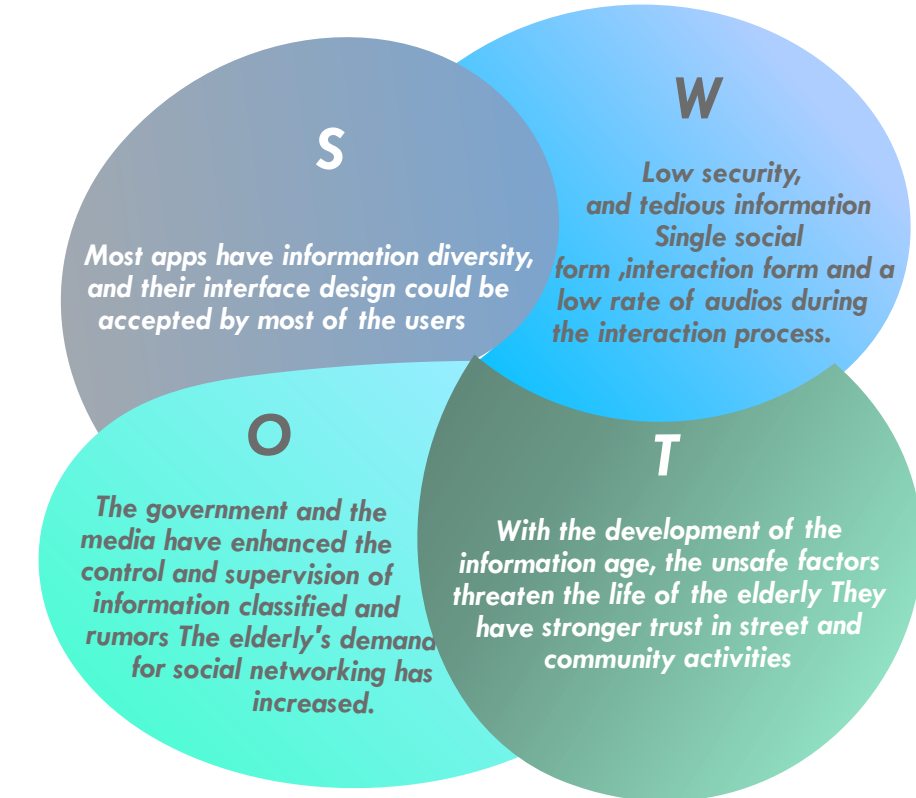

We found most of them always feel **lonely**. They need social identity and groups based on their interest.

## Market research

## My choice

As more and more elderly trying to use smart phone, I decided to design an app with an elderly friendly interaction style to show my idea.

## SWOT analysis

## INSIGHT

My product will focus on standardizing information and providing a green interest dating platform for the elderly.

# Scenario

## AT HOME

**Watch TV Use Smart  
phone Feel lonely &  
bored**

## COMMUNITY

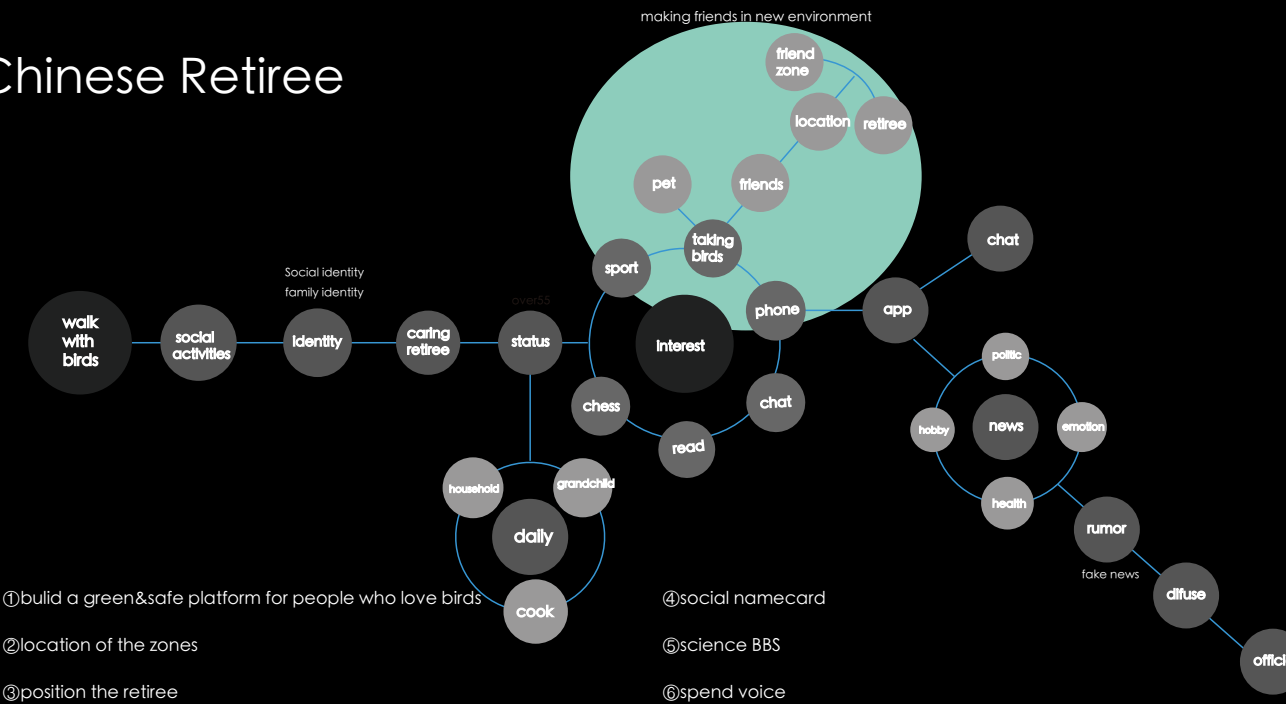

**Real/Virtual**  
**Expand social circle**  
**Chat**

## IN THE PARK

**Walking the pet  
bird Sports and  
dance Chat**

# Chinese Retiree

## Problem

**Lonely**

**depends on the geographical position not the interest**

**can't get the all information  
of each circle**

## Opportunity

**Internet and Smart  
phone are more  
popular**

### Virtual circle and reality circle combination

### ***A social approach based on the elderly's hobbies***

68 male live alone in  
Nanjing  
love dancing & bird

slow response  
older  
love chat

## Customer needs

**social interest group**

# Persona

***‘I always feel lonely while my children go to work’***

***'I want to find somebody to talk.'***

The interaction forms that people want to try in the Museum.

## Background

History Museum, always refers to a place with lots of words, pictures and antiques.

## Opportunity

Many museum designers are trying to add new display forms into the museum to help people have **better** understanding and experience.

## Market research

	✓	×
	direct effect on visitors themselves	rigid sense of environment a little extractable information
	immersive experience	effect on users themselves a little extractable information

## Tendency

Haomaiyi Smart try-on

B612 Camera

## Design Map

## SWOT analysis

**S**

Most dressing projects can easily attract the visitors by its direct&easy pattern of manifestation

**W**

Most of the project focus on the display effect, and thus, add a little value information in the project

**O**

There are many kinds of information in the historical museum that can be used and mixed into the interaction project

**T**

Many museum curator are now thinking of adding more elements to their museum in order to attract more visitors.

## INSIGHT

Using motion capture and the mirror to see the display effect and the differences directly.

Now the display effect is better and better. My project will be aimed to add more **value and interesting** history information in the process of experiencing the interaction. To make the visitors get some unforgettable feelings during the experience process.

# Scenario

Touch & saying

a normal  
interaction type

Wear a device

technique  
Very interesting

Body motion

technique  
very interesting

## Problem

It's hard to balance the  
enjoyment and the information.

## Opportunity

Increase the creativity to make the  
historical museum more attractive.

### Background

22  
female  
under-graduated  
student  
seldom go to the  
historical museum

### Attributes

highly  
fickleness  
love  
technology

‘ I want to see the history  
be displayed at a more  
technical way. ‘

### Customer needs

Something special  
in the museum

wide experience & knowledge  
love to try

### Customer needs

Be interested in  
visiting the historical  
museum

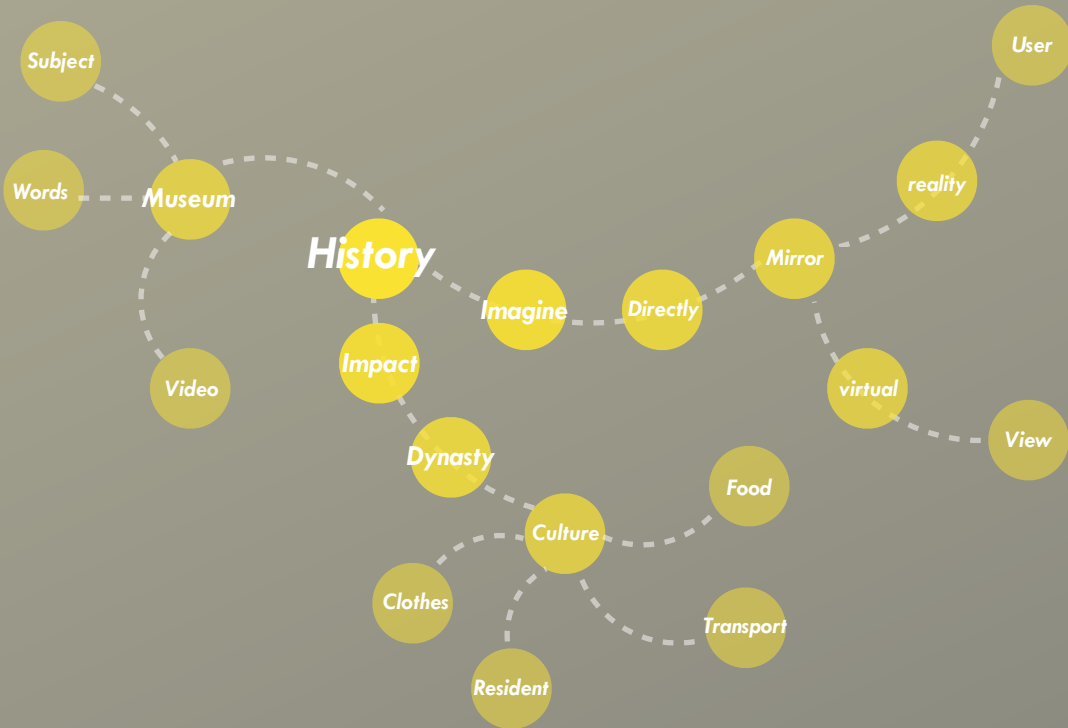

## Persona

‘ I want to be surprised  
when visiting the museum  
in a new way. ’

### Background

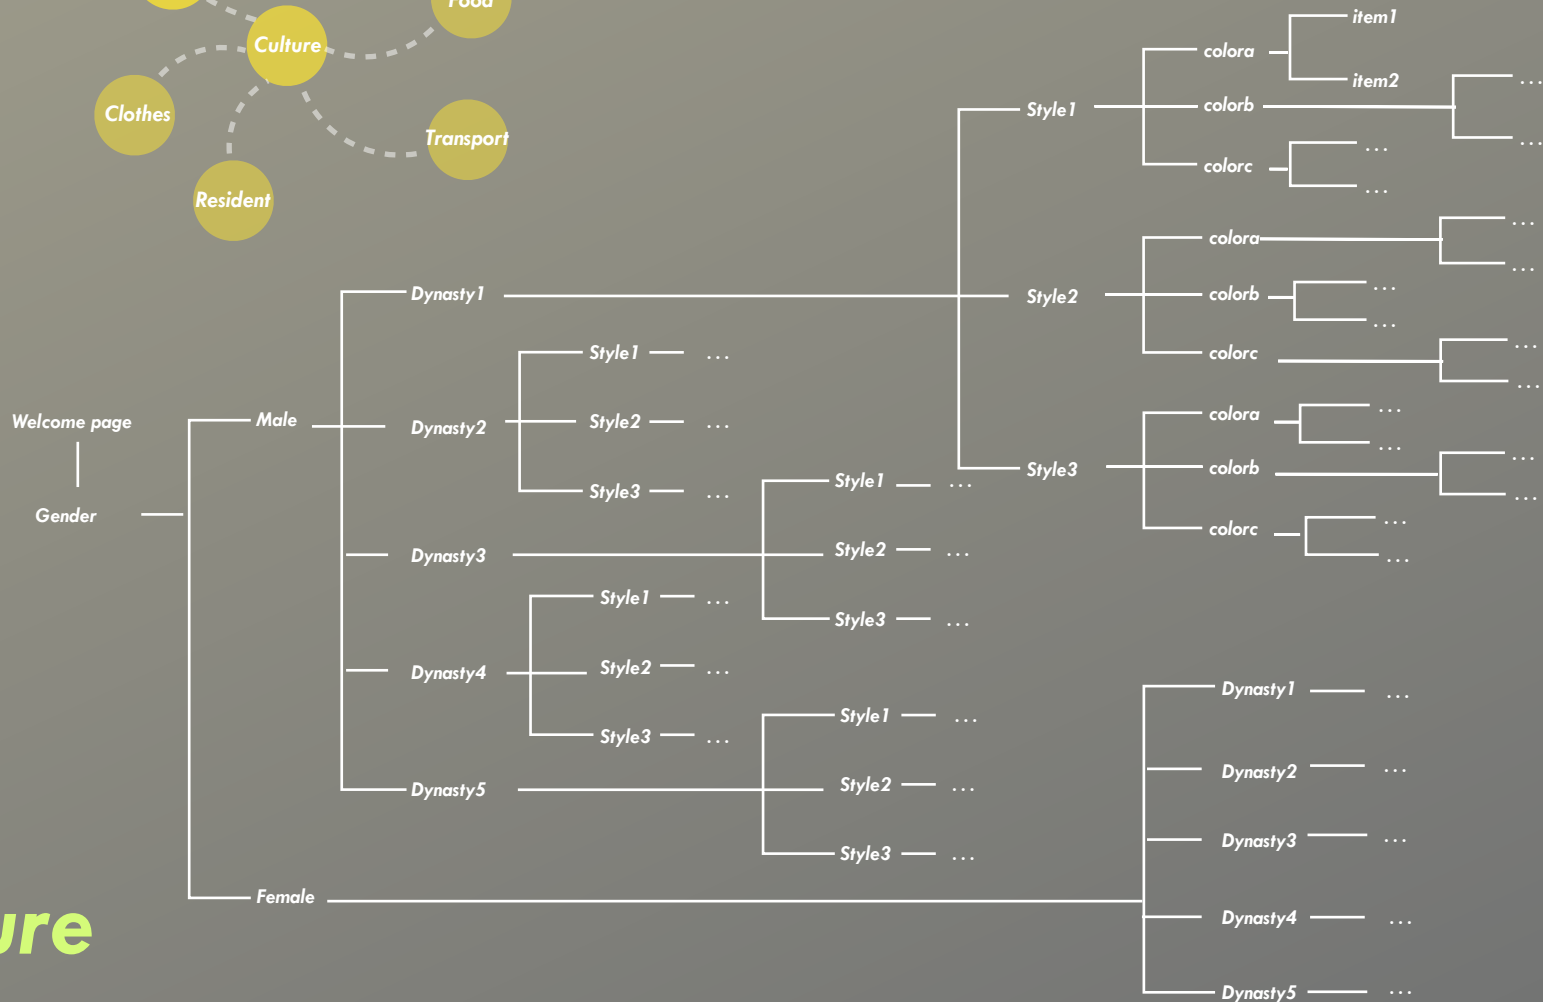

40  
male  
usually go to all kinds of museum

## Structure

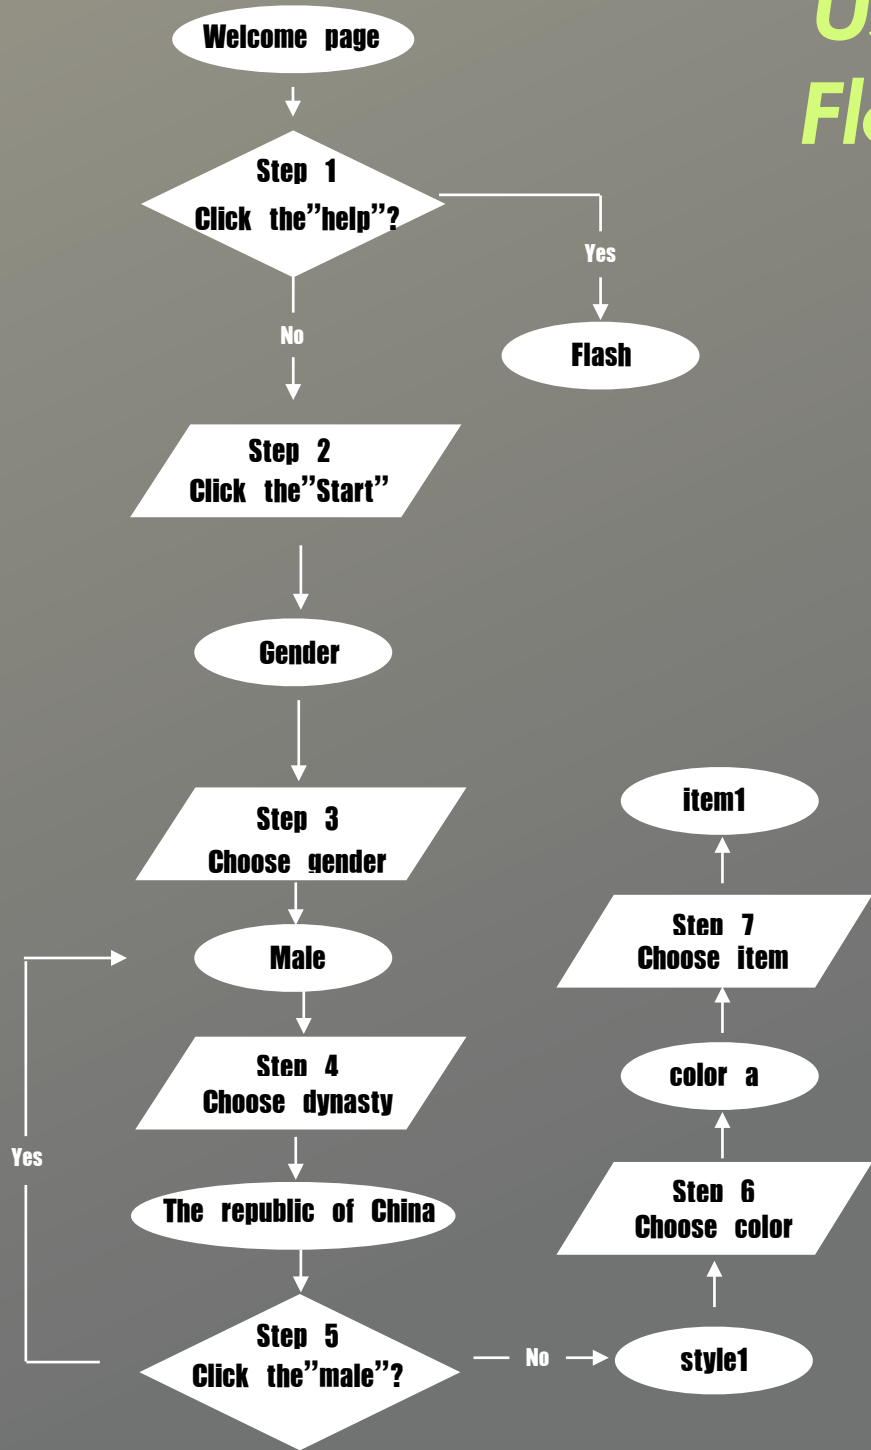

## Mind Map

Using mirror as the media to show the  
effects of visitors wearing ancient  
clothes.

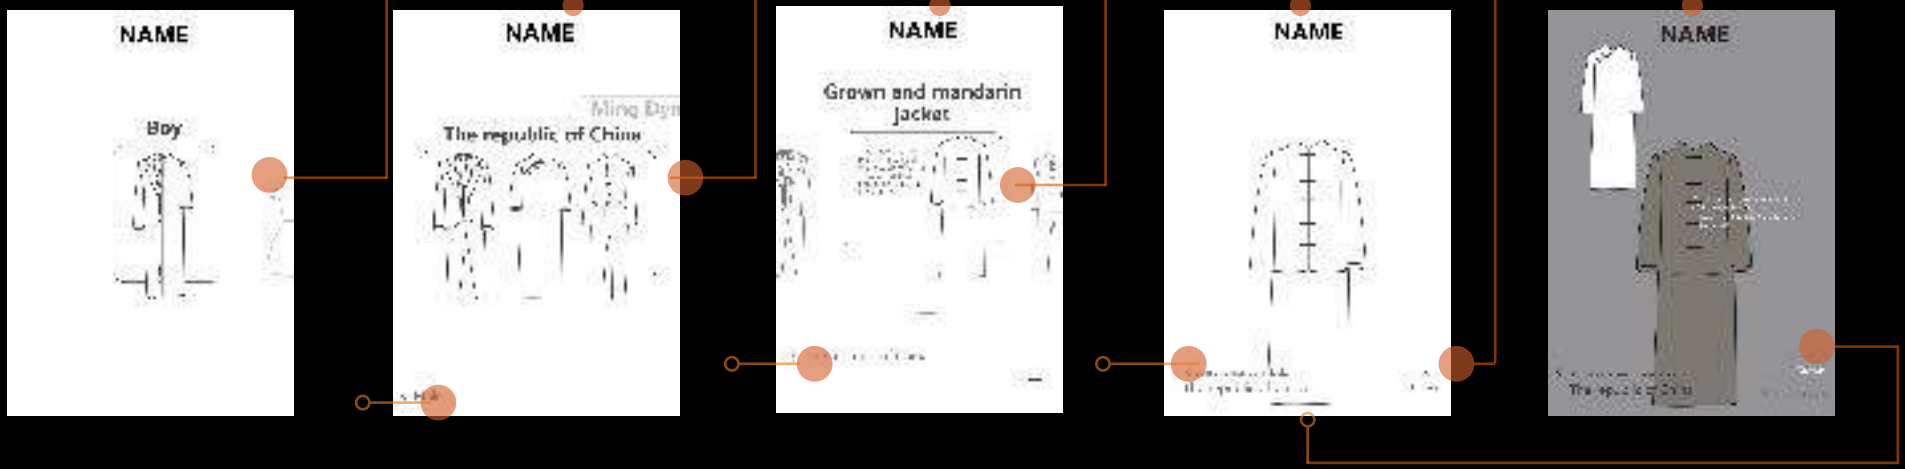

## User Flow

# Visual effect

## 01 Choosing Process

## Wireframes

### Dynasties choice

### Clothes

## 02 Real Effect

## 03 Other Dynasties

A device makes the historical museum more attractive to children set in the history museum.

### 3 ways interviews

The ways people use to gain information in the historical museum

## Background

History itself is an **abstract** word; while exploring in the museums, we are able to learn the strength of time directly. However, in such space, children can quickly lose their patience and interest as they haven't acquired the **ability** to comprehend the meaning behind it.

## Opportunity

The historical museums are expected to be more **attractive** to children.

## Conclusion

Fun & knowledge

## Target user

## Market research

fun				
information				

## Tendency

Point-touch Screen

## My choice

Using the point-touch method, as it's a more effective way to combine study and play.

Make the historic museum more attractive to children. Not only focus on the interesting, but also the useful knowledge.

## Design Map

## SWOT analysis

**S**

Most interaction projects can easily attract the children who are hyperactive. And most of the objects in the historical museums are not allowed to touch

**W**

Most project can't find a best way make the balance between information and enjoyment

**O**

Change the words into a visual form, which could be a picture that is easier for children to read.

**T**

More and more interesting interaction projects are introduced into the historical museum

## INSIGHT

My project will focus on balancing the quality of enjoyment and information.

Scenario

At Museum

Learning by parents explanation

At Home

Learning knowledge the app through Pad/PC

In the class

Learning knowledge through games

Problem

The single mode could easily make the children feel boring

Opportunity

Try some new display forms to make the historical museum more attractive to children

Persona

**Background**

7-year-old girl  
live in Nanjing  
love learning things

**Attributes**

pupil  
lack of understanding

**Customer needs**

historic knowledge

**Customer needs**

be interested in history museum

**Attributes**

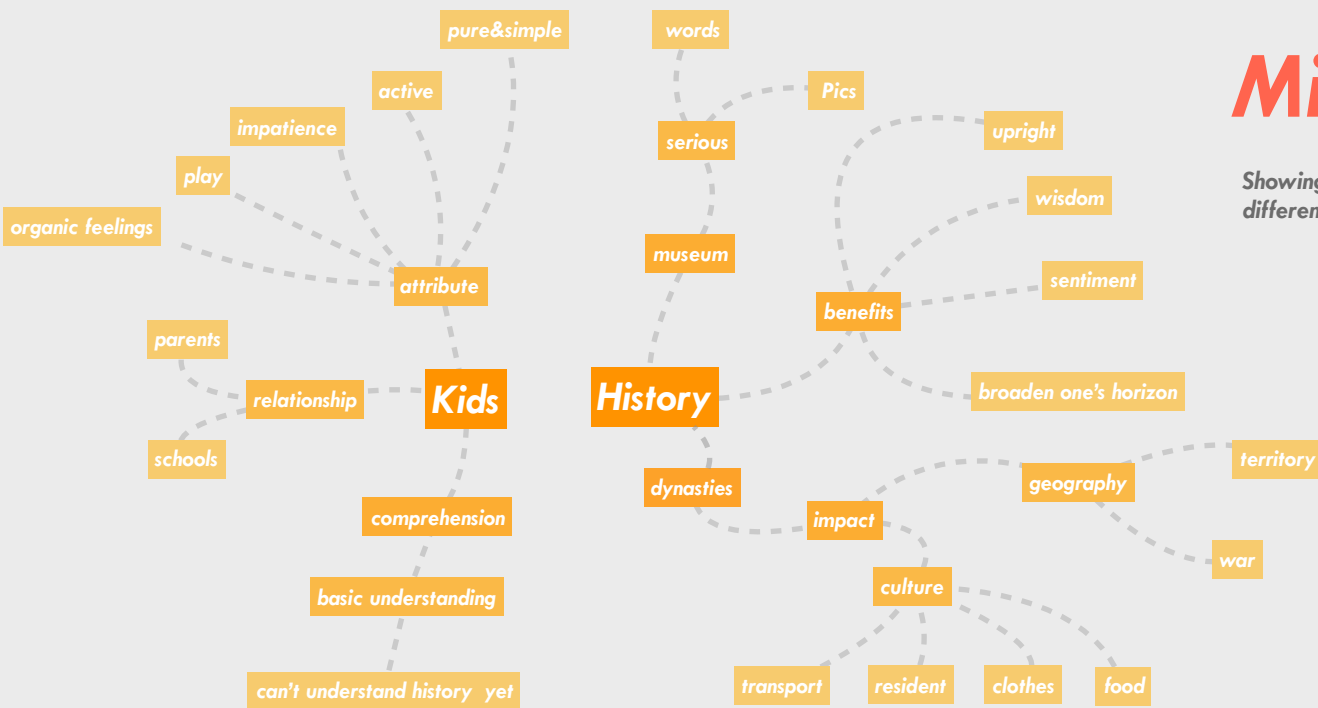

playful curiosity

**Background**

5-year-old boy  
travel to Nanjing with parents  
love the cool things in kindergarten  
want to have some special experience

*"I'm confused when i am in the historical museum."*

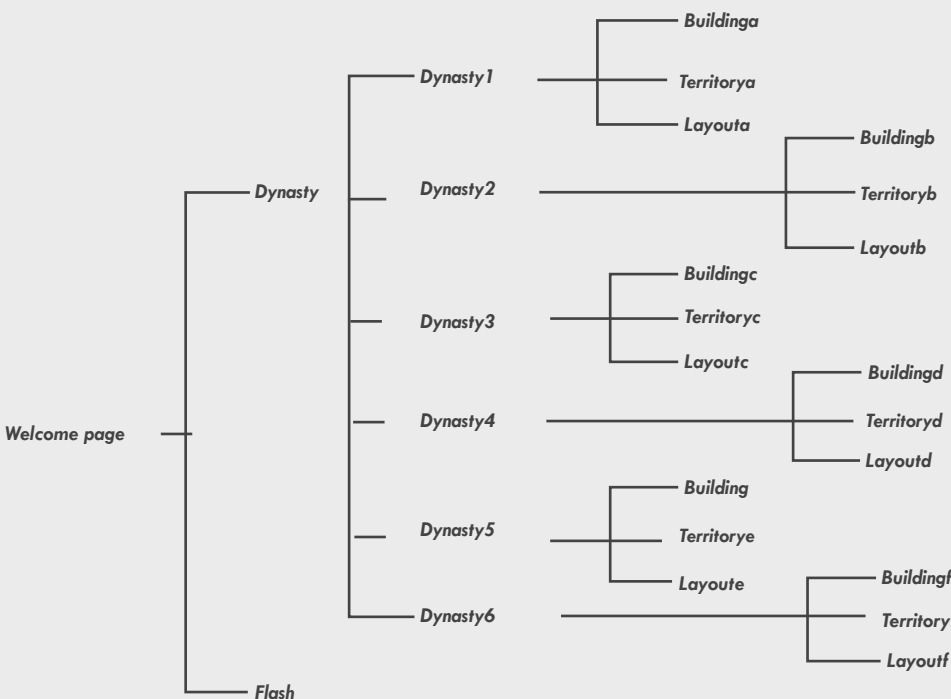

*"Historical museum is boring."*
